DETAILED ACTION

Allowable Subject Matter

26. p. 11
Claim 1-31 allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claim 1, there is no prior art of record that teaches a liquid crystal display having a switching device disposed on a portion of the first substrate, and the switching device coupled between a data line and a pixel electrode, a color filter layer disposed between the switching device and the first substrate, and the data line disposed between the color filter and the data line disposed between the color filter and the first substrate.

Regarding claim 16, there is no prior art of record that teaches forming a data line on the substrate, forming a color filter on the data line and the substrate, forming an overcoat on the color filter and forming a switching device on the overcoat and the switching device coupled between a data line and pixel electrode. Prior art does disclose placement of the transistor on an overcoat layer however prior does not teach the data electrode formed on the substrate with the formation of a color filter located below the switching device.

Kim et. at US Patent No. 6597420 (see fig. 4) teaches a color filter layer disposed between the switching device and the first substrate however the switching device (formed by elements 205a 206, 208 and 209) is not coupled between a data line

and a pixel electrode and the data line (210) is not disposed between the color filter and first substrate.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
